ANALYZING TECH INDUSTRY LAYOFFS AND HIRING TRENDS (2024-2026)

The rapid advancement of AI has raised concerns about the future of jobs in the technology industry. Many job seekers ask, **"Will AI replace tech jobs?"** and **"What is the current job market like?"** This project analyzes tech industry data from **2024-2026** to examine layoff and hiring trends, company and industry performance, AI adoption, AI-related job risks, and the main reasons for layoffs. The goal is to provide data-driven insights into how AI is reshaping employment in the tech sector and help job seekers better understand the changing job market.

AI Automation (2,435) and Overhiring Correction (2,433) were the two most common reasons for layoffs, followed closely by Restructuring (2,401), indicating that companies were adjusting their workforce in response to technological change and organizational realignment.

Downsizing was the most common hiring trend (29.01%), while only 5.21% of companies reported aggressive hiring, suggesting that most organizations remained cautious despite continued recruitment.

The AI industry maintained the strongest hiring activity (51.3%), whereas the Social Media industry had the lowest hiring rate (35.4%), reflecting differences in workforce demand across sectors.

Machine Learning Engineers were the most sought-after role (2,190 companies), followed by Data Scientists, highlighting continued demand for AI and data-related talent despite widespread layoffs.

Analyzing Tech Industry Layoffs and Hiring Trends

Overview	Layoffs Analysis	Layoffs By Year	AI Adoption Analysis	Layoffs Vs Hiring	Finding & Recommendation
----------	------------------	-----------------	----------------------	-------------------	--------------------------

Despite major layoffs, technology companies continued hiring for critical AI, cloud, cybersecurity, and data roles, indicating strategic workforce restructuring rather than reduced hiring demand.

Open Roles

Despite widespread layoffs, technology companies continue to maintain a high number of open positions, indicating that workforce reductions are occurring alongside ongoing recruitment.

Apple, Google, Salesforce, Oracle, and OpenAI reported some of the highest numbers of open roles, suggesting continued investment in strategic talent acquisition.

Databricks recorded the highest layoff count among the companies analyzed, while Google and Meta also experienced substantial workforce reductions despite active hiring.

The relatively small differences in open roles across companies suggest that hiring demand remained resilient throughout the 2024–2026 period.

Layoffs appear to be concentrated in certain business functions, while hiring continues for high-demand technical and AI-related positions.

Companies are reallocating talent toward strategic growth areas such as artificial intelligence, cloud computing, cybersecurity, and data engineering.

The coexistence of high layoffs and thousands of open positions highlights a shift in workforce strategy, emphasizing skill transformation over workforce expansion.

Focus on developing skills in artificial intelligence, machine learning, data analytics, and cloud computing, as these roles continue to experience strong hiring demand.

Prioritize opportunities in AI, cloud computing, cybersecurity, and FinTech, where hiring activity remains stronger despite ongoing workforce restructuring.
